This example uses Perl objects, specifically the class FTP from the Net module.

```
[]

.PerlPackage("Net::FTP")

f <- .PerlNew("Net::FTP", "franz.stat.wisc.edu")

f$ls(array=T)
f$dir(array=T)

f$login("anonymous", "duncan@wald.ucdavis.edu")
f$get("welcome.msg")
f$quit()
```
